

ENTER AN IDEC ELEVATOR

**MANUFACTURING AND FABRICATION OF
ELEVATOR CABS, DOORS, ENTRANCES AND INTERIORS**

■ IDEC Elevators

About Us

Since 1989, IDEC has been a full-service elevator manufacturing/fabrication company for both residential and commercial clients across the United States.

Our specialization in both standard and custom elevator cabs, doors, entrances and interiors makes us the smart choice for any building; including condos, hotels, retail stores, clubhouses and more. Whether you're planning for a new elevator or updating an existing one, IDEC will provide you with the knowledge and experience to stay in budget and within elevator safety code compliance.

Our Specialities

Commercial & Residential – Standard and Custom:

- Doors
- Cabs
- Entrances
- Interiors

Elevator Components including:

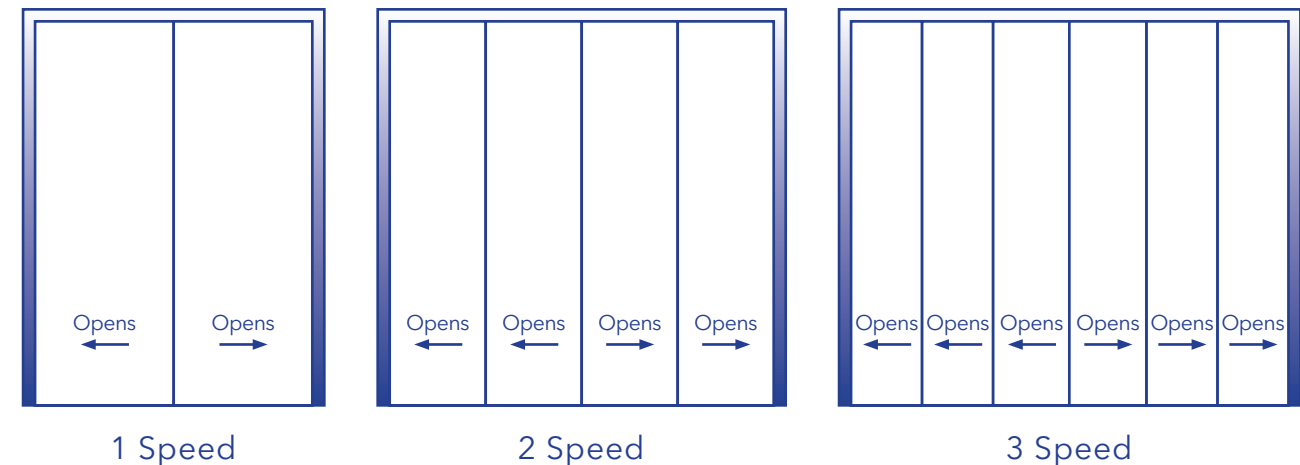

- Submersible & dry power units
- Slings
- Platforms
- Pit equipment

Entrances & Doors

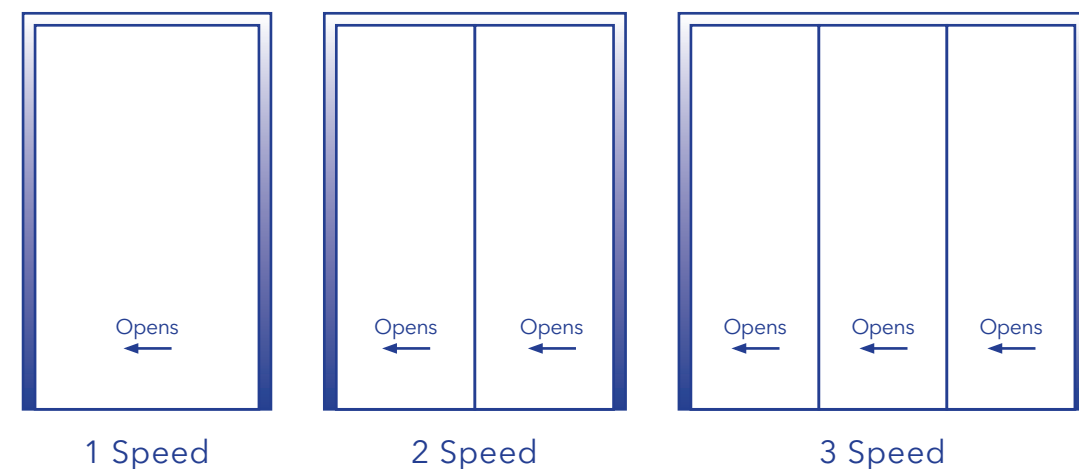

Entrance Options

Center Opening

Side Opening

Some of the most used entrances are elevators

Elevator entrances need to look good, be reliable, safe and code compliant. At IDEC, we combine these elements and have built some of the most aesthetically pleasing and structurally sound elevator entrances and doors on the market today.

Our entrances come complete with doors, headers, struts, dust covers, z-fascia, sills and all fastening brackets and hardware. They can be fabricated from 14 or 16 gauge material or customized to any thickness required. Our entrances are fire tested and meet or exceed all code requirements. To save you both time and money in the field, our entrances come reinforced, drilled and tapped to your specifications. So whether you need one residential lift or multiple elevators for a condominium complex, office building or even a hospital, you can count on IDEC for quality elevator manufacturing services.

Standard or Custom Frames & Doors

Our elevator frames and doors are available in an infinite choice of colors and finishes ranging from sleek architectural metals, state-of-the-art powder coating, or luxurious custom materials:

Architectural Metals

Powder Coated

Custom Materials

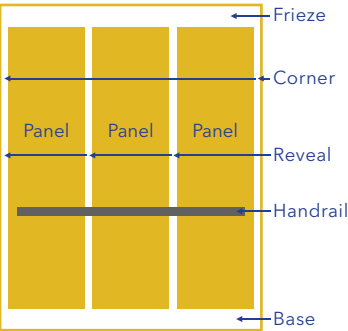

Cabs & Interiors

Materials

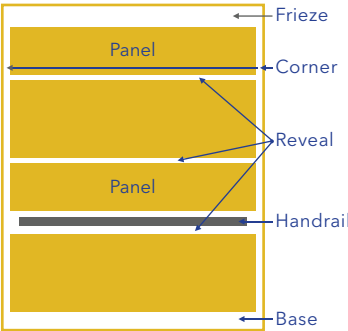

While some elevators need to be practical, others need to be aesthetically pleasing, which is why IDEC works with all types of materials to customize your elevator cab. From either laminate, glass, marble or hardwood – we can use various materials to fit your design and budget.

Panel Configurations

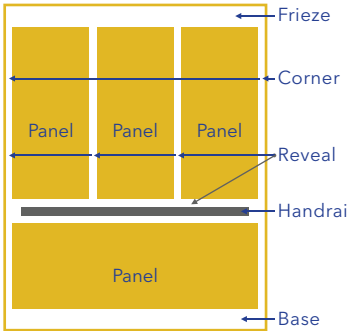

Each of our 5 lines can be configured in any of the stylish options below. Each panel can be made using different materials from each line, allowing for endless design options.

Cabs & Interiors

Ceilings

To further bring your vision to reality, IDEC offers a diverse selection of ceiling options. We offer fluorescent, LED and tamper-proof lighting options in a variety of ceiling materials. Lexan diffusers can also be customized to suit your design needs. Some of our most popular options include:

Hand Rails

Our large variety of standard and custom handrails allows us to match your current decor, create any look you desire or provide additional functionality.

Our Process

Our 20,000 square foot manufacturing facility uses the latest CAD and CAM assisted turret punches and press brakes for complete control and accuracy. Each cab is fully assembled and checked for fitment and alignment prior to shipment. After passing inspection, cabs and doors are shipped upright and on edge to ensure straightness. All of our crating is fully reinforced, guaranteeing your cabs and doors arrive intact, on time and ready to install. We stand behind our process completely and invite all of our customers to our facility in Riviera Beach, FL to view our process.

Production

Once the elevator submittals are approved, our team of highly skilled technicians use the latest machinery to complete your fabrication requests. The components are then packaged in reinforced crating and begin their journey to your job-site.
